1 Identification

- Product identifier
  - Trade name: UTP 612
  - Application of the substance / the mixture: Shielded Metal Arc Welding Electrode
- Details of the supplier of the safety data sheet
  - Manufacturer/Supplier: voestalpine Böhler Welding Germany GmbH
    Unionstraße 1
    D-59067 Hamm
    phone +49 2381 271 - 02
    fax +49 2381 271 - 750
    www.voestalpine.com/welding
  - Information department:
    Research and Development
    Helena Stabel
    +49 2381 271 - 578;
    Helena.Stabel@voestalpine.com
- Emergency telephone number:
  - voestalpine Böhler Welding Germany GmbH
    +49 2381 271 - 578 (Germany: Mo - Th from 8am to 4pm; Fr from 8am to 1pm)

2 Hazard(s) identification

- Classification of the substance or mixture
  The product is not classified according to the Globally Harmonized System (GHS).
- Label elements
  - GHS label elements: Void
  - Hazard pictograms: Void
  - Signal word: Void
  - Hazard statements: Void
  - NFPA ratings (scale 0 - 4)
    - Health = 1
    - Fire = 0
    - Reactivity = 0
- HMIS-ratings (scale 0 - 4)
  - Health = *1
  - Fire = 0
  - Reactivity = 0
- Other hazards
  - Results of PBT and vPvB assessment
    - PBT: Not applicable.
    - vPvB: Not applicable.

3 Composition/information on ingredients

- Chemical characterization: Mixtures
- Description: Mixture of the substances listed below with nonhazardous additions.
4 First-aid measures

- **Description of first aid measures**
  - **General information:** No special measures required.
  - **After inhalation:** Supply fresh air; consult doctor in case of complaints.
  - **After skin contact:** Generally the product does not irritate the skin.
  - **After eye contact:** Rinse opened eye for several minutes under running water.
  - **After swallowing:** Seek medical treatment.

- **Most important symptoms and effects, both acute and delayed**
  No further relevant information available.

- **Indication of any immediate medical attention and special treatment needed**
  No further relevant information available.

5 Fire-fighting measures

- **Extinguishing media**
  - **Suitable extinguishing agents:** Suitable to surrounding conditions

- **Special hazards arising from the substance or mixture**
  No further relevant information available.

- **Advice for firefighters**

- **Protective equipment:** No special measures required.

6 Accidental release measures

- **Personal precautions, protective equipment and emergency procedures**
  Ensure adequate ventilation
  Use respiratory protective device against the effects of fumes/dust/aerosol.

- **Environmental precautions:** No special measures required.

- **Methods and material for containment and cleaning up:** Pick up mechanically.

- **Reference to other sections**
  See Section 7 for information on safe handling.
  See Section 8 for information on personal protection equipment.
  See Section 13 for disposal information.

7 Handling and storage

- **Handling:**
  - **Precautions for safe handling** Ensure that suitable extractors are available on processing machines
  - **Information about protection against explosions and fires:** No special measures required.
· Conditions for safe storage, including any incompatibilities
  · Storage:
  · Requirements to be met by storerooms and receptacles: No special requirements.
  · Information about storage in one common storage facility: Not required.
  · Further information about storage conditions: None.
  · Specific end use(s) No further relevant information available.

8 Exposure controls/personal protection

· Control parameters
  · Components with limit values that require monitoring at the workplace:

· Additional information: The lists that were valid during the creation were used as basis.

· Exposure controls
  · Personal protective equipment:
    · General protective and hygienic measures:
      Wash hands before breaks and at the end of work.
      The usual precautionary measures for handling chemicals should be followed.
43.0.3

- **Breathing equipment:** Filter P2
- **Protection of hands:**
  Heat protection gloves (non-combustible)
  The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
  Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.
  Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
  Rubber gloves
  Acid resistant gloves
- **Penetration time of glove material**
  The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
- **Eye protection:** Safety glasses
- **Body protection:**
  Protective work clothing
  Wear hand, head, and body protection which help to prevent injury from radiation, sparks, and electrical shock. See ANSI Z49.1. At a minimum this includes welder’s gloves and a protective face shield, and may include arm protectors, aprons, hats, shoulder protection, and well as dark substantial clothing. Train the welder not to touch live electrical parts and to insulate himself from work and ground.

---

**9 Physical and chemical properties**

- **Information on basic physical and chemical properties**
- **General Information**
- **Appearance:**
  - Form: Solid
  - Color: Not determined.
  - Odor: Odorless
  - Odor threshold: Not determined.
- **pH-value:** Not applicable.
- **Flash point:** Not applicable.
- **Flammability (solid, gaseous):** Not determined.
- **Decomposition temperature:** Not determined.
- **Auto igniting:** Product is not selfigniting.
- **Danger of explosion:** Product does not present an explosion hazard.
- **Explosion limits:**
  - Lower: Not determined.
  - Upper: Not determined.
- **Relative density**
  - Not determined.
- **Vapor density**
  - Not applicable.
- **Evaporation rate**
  - Not applicable.
- **Water:** Insoluble.
- **Partition coefficient (n-octanol/water):** Not determined.
- **Dynamic:** Not applicable.
- **Kinematic:** Not applicable.
- **Organic solvents:** 0.0 %
- **VOC content:** 0.0 g/l / 0.00 lb/gl
10 Stability and reactivity

- **Reactivity** No further relevant information available.
- **Chemical stability**
  - **Thermal decomposition / conditions to be avoided:**
    No decomposition if used and stored according to specifications.
  - **Possibility of hazardous reactions** No dangerous reactions known.
  - **Conditions to avoid** No further relevant information available.
  - **Incompatible materials:** No further relevant information available.
  - **Hazardous decomposition products:**
    Reasonably expected fume constituents of this product would include:
    - Chromoxide.
    - Nickel oxide.
    Reasonably expected gaseous constituents would include Carbon monoxide and Carbon dioxide. Ozone and nitrogen oxides may be formed by the radiation from the arc. One recommended way to determine the composition and quantity of fumes and gases to which workers are exposed is to take an air sample from inside the welder's helmet if worn or in the worker's breathing zone. See ANSI/AWS F1.1 and ANSI/AWS F1.2-1992. In order to determine and evaluation of the existing problem areas, the standards EN ISO15011 –parts 1,4 can also be applied.

11 Toxicological information

- **Information on toxicological effects**
- **Additional toxicological information:**
  The product is not subject to classification according to internally approved calculation methods for preparations: When used and handled according to specifications, the product does not have any harmful effects according to our experience and the information provided to us.
- **Carcinogenic categories**
  - **IARC (International Agency for Research on Cancer)**
    - 13463-67-7 titanium dioxide 2B
    - 14808-60-7 silicon dioxide 1
  - **NTP (National Toxicology Program)**
    - 14808-60-7 silicon dioxide K
  - **OSHA-Ca (Occupational Safety & Health Administration)**
    None of the ingredients is listed.

12 Ecological information

- **Toxicity**
- **Aquatic toxicity:** No further relevant information available.
- **Persistence and degradability** No further relevant information available.
- **Behavior in environmental systems:**
- **Bioaccumulative potential** No further relevant information available.
- **Mobility in soil** No further relevant information available.
- **Additional ecological information:**
- **General notes:** Generally not hazardous for water

16 Other information
This information is based on our present knowledge. However, this shall not constitute a guarantee for any specific product features and shall not establish a legally valid contractual relationship.

· Additional information:
  Recommendations for exposure scenarios, measures for risk management and identification of working conditions under which metals, metal alloys and products made of metal can be safely worked can be found attached.
  Detailed information can be found on our webpage www.voestalpine.com (Environment, REACH at voestalpine).
Recommendations for Exposure Scenarios, Risk Management Measures and to identify Operational Conditions under which metals, alloys and metallic articles may be safely welded

Welding/Brazing involves fumes which can affect human health and the environment. Fumes are a varying mixture of airborne gases and fine particles which, if inhaled or swallowed, constitute a health hazard. The degree of risk will depend on the composition of the fume, concentration of the fume and duration of exposure. The fume composition is dependent upon the material being worked, the process and consumables being used, coatings on the work such as paint, galvanizing or plating, oil or contamination from cleaning and degreasing activities. A systematic approach to the assessment of exposure is necessary, taking into account the particular circumstances for the operator and auxiliary worker that can be exposed.

Considering the emission of fumes when welding, brazing or cutting of metals, it is recommended to (1) arrange risk management measures through applying general information and guidelines provided by the exposure scenario and (2) using the information provided by the Safety Data Sheet, issued in accordance with REACH, by the welding consumable manufacturer.

The employer shall ensure that the risk from welding fumes to the safety and health of workers is eliminated or reduced to a minimum. The following principle shall be applied:

1. Select the applicable process/material combinations with the lowest class, whenever possible.
2. Set welding process with the lowest emission parameters.
3. If necessary, use an environmental measure in accordance with class number. In general, the use of PPE is taken into account after all other measures is applied.
4. Wear the required personal protective equipment in accordance with the duty cycle.

In addition, compliance with the National Regulations regarding the exposure to welding fumes of workers and related personnel shall be verified.

In the table "Risk Management Measures for individual process/material combinations" below, reference is made to the following standards for collective and personal protection measures:

In addition to the "Risk Management Measures for individual process/material combinations", reference is made to footnotes.

The description of these footnotes:

1. Class: approximate ranking to mitigate risk by selecting process/material combinations with the lowest value.
2. Collective: measures and individual risk management measures shall be applied.
3. Ventilation (GV) Low. With additional Local Exhaust Ventilation (LEV) and extracted air to the outside, the GV or LEV capacity may be reduced to 1/5 of the original requirement.
4. General Ventilation (GV) Medium (doubling compared to LEV).
5. Filtering half mask (FFP3).
6. When an allowed consumable is used, measures from "Class V" are required.
7. General Ventilation (GV) Low. When no Local Exhaust Ventilation, the ventilation requirement is 5-fold.
8. Filtering half mask (FFP3), helmet with powered filters (TH/P2P), or helmet with external air supply (LDH2).
9. Reduced negative pressure area: a separate, ventilated area where reduced negative pressure, compared to the surrounding area, is maintained.
10. Local Exhaust Ventilation (LEV) High, extraction at source (includes table, hood, arm or torch extraction).
11. Helmet with powered filters (TH/P3P), or helmet with external air supply (LDH3).
12. Local Exhaust Ventilation (LEV) Medium, extraction at source (includes table, hood, arm or torch extraction).
13. Recommended measures to comply with national maximum allowable limits. Extracted fumes, for all materials except unalloyed steel and aluminium, shall be filtered before release in the outside environment.
14. A confined space, despite its name, is not necessarily small. Examples of confined spaces include ship, wells, vats, utility vaults, tanks, etc.
15. Improved helmet, designed to avoid direct flow of welding fumes inside.
16. Not applicable.
17. Not recommended.
